New Project, Tannery in Ayutthaya, Thailand

Aschoff Solar and Terramar Thailand finished a new ST project, for a tannery in Ayutthaya.

Team Thailand installed the collector area with support of Mr. Jorg Steinke and four German experts within eight days.

The System is designed for the support of the Hot-Water System, which is needed for the retanning process.

For the first time, the new storage tank concept by Aschoff Solar was installed. In this connection, sea freight containers will be equipped with water tanks and control units. The advantage amongst others is the optimized storage volume and energy flow through the vertical design.

With the new reference, Aschoff Solar again realized a ST project in Southeast Asia and consolidates its position in the region.

Project Data

Location: Ayutthaya, Thailand
Collector Area: 1,890 m²
