### Global Strike for Future

May 2019

Dear Friends, Customers, Business Partners,

on March 24th last year, 1.6 Mio people went on the streets for the first Global Strike for Climate in more than 120 countries all over the world.

It was not just anybody on the streets - it was our children!

The next generation has the chance - maybe the last ever - to change something and to create a future worth living in it for them.

Our generation failed - even we had all necessary informations and tools on hand - so the least we must do is to support them now in their activities to make the turnaround and to increase the pressure on politics, to finally take the problem for serious and to undertake quick and right actions.

On May 24th, 2019 we have the second Global Strike for Climate, which needs stronger support worldwide to keep the momentum for the activists of „Friday for Future“ which they have at the moment. And not only in talks with friends, where we express how nice and important it is that kids finally care about something else than senseless leisure activities and how great Greta Thunberg is.

I am sure, everybody could do something.

We all have a network of friends and business partners on the globe - try to activate it and encourage them to join and register for the Strike.

Guess we all do not like chain letters, but if you try to address your network personally it may have an impact and some may listen.

I am not a specialist on Social Networks, but I know about the power it can have. Use your social networks to encourage friends to join and distribute.

Support and strike or stop for a moment on 24th.

Register on [fridaysforfuture.org](https://fridaysforfuture.org)

Make a halt in your office, factory or other activities.

Do not use air condition, computer, car, maybe even any machines if possible.

Stop for e.g. an hour and use the time to discuss and work out practical solutions with your family, colleagues and employees, what you can do within your range of influence at work and at home. Share this best practices and new ideas via the social network and the activists at [fridaysforfuture.org](https://fridaysforfuture.org).

Support them with practical ideas and concrete resolutions they can bring in.

The younger generation counts on us.
